

CALIFORNIA Economic Indicators

July August 2005

Better Job Growth

California's labor markets have strengthened in 2005

REVIEW OF RECENT ECONOMIC DEVELOPMENTS

2005 is shaping up to be a year of solid economic gains for California. Less-than-stellar job growth in 2004 turned into solid, sustained expansion in 2005. Real estate markets are still robust, with few, if any, signs of a much-discussed real estate market collapse. Slower export growth is the only area of unmet expectations.

Employment

California's labor markets have improved considerably from 2004. The state gained jobs during each of the first eight months of 2005, averaging 20,400 per month. Even though the average monthly gain in 2004 was higher, this should be considered an improvement due to a questionably large gain in July 2004—nearly 115,000—that was probably due to a bad seasonal adjustment factor. Not counting July, last year's monthly gain was only 12,500. Average year-over-year nonfarm payroll growth during the first eight months of 2005 was 1.6 percent versus 0.7 percent during the same months of 2004.

From August 2004 to August 2005, nonfarm payroll employment grew by 223,300, or 1.5 percent. Employment rose in nine out of 11 major industry sectors: 60,900 in Construction; 40,700 in Professional and Business Services; 40,400 in Leisure and Hospitality; 22,300 in Trade, Transportation and Utilities; 22,000 in Educational and Health Services; 14,300 in Financial Activities; 12,100 in Government; 5,600 in Information; and 5,600 in Other Services. Employment fell by 500 in Manufacturing and 100 in Natural Resources and Mining.

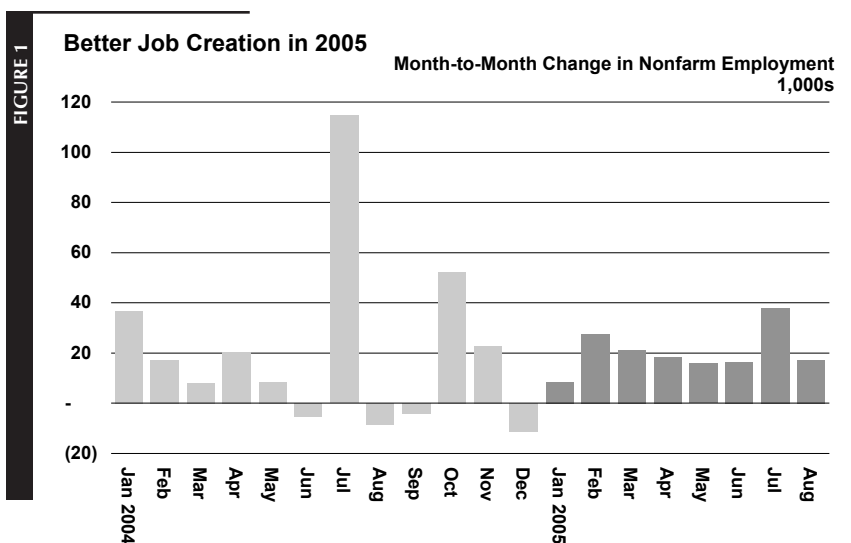

California's job gains have been heavily dependent on building activity in recent years. Construction employment's share of total employment increased from 5.2 percent at the beginning of 2001 to 6.2 percent in August 2005. More importantly, it accounted for nearly 28 percent of new nonfarm jobs created during the first eight months of 2005.

Erratic unemployment gains

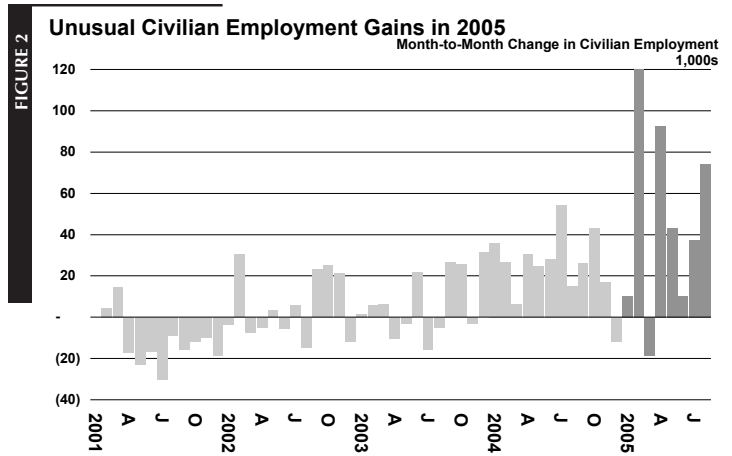

Amid substantial volatility, the state's unemployment rate improved steadily during the first eight months of 2005. The unemployment rate was 5.2 percent in August, down from 6.0 percent in December 2004. However, the labor force statistics have been more erratic since the Bureau of Labor Statistic adopted a new local area methodology in February of this year. Both employment and unemployment

Economic Indicator Charts	9
Chronology	13

estimates experienced several dramatic fluctuations. Civilian employment jumped by 127,400 in February, 92,500 in April, and 74,100 in August. From 2001 through 2004, monthly employment gains averaged 6,600, and the largest one-month gain was only 54,500. Unemployment fell 67,100 in March and 48,200 in July of 2005. Again, this volatility is out of proportion to past experience. On average, from 2001 through 2004, unemployment fell by 5,100 each month. The largest one-month drop was 21,400.

The Los Angeles area unemployment rate estimates probably overstate the improvement in that area. The official statistics show the unemployment rate dropping sharply to 5.0 percent in August from 5.7 percent in July. This improvement is based principally on a nearly 13-percent decline in civilian unemployment. Unemployment is falling in the Los Angeles area, but not likely at that pace.

BUILDING ACTIVITY

Sustained home building

Even though home building slowed in August, this year is still on track to match the vigorous pace achieved in 2004. Residential building permits were issued at a seasonally adjusted, annual rate of 212,000 units during the first eight months of 2005. This is slightly better than the 210,000-unit pace set during the same months of 2004. Single-family construction picked up enough over last year to more than compensate for a slight slowing in the multi-family sector.

Nonresidential slower but still healthy

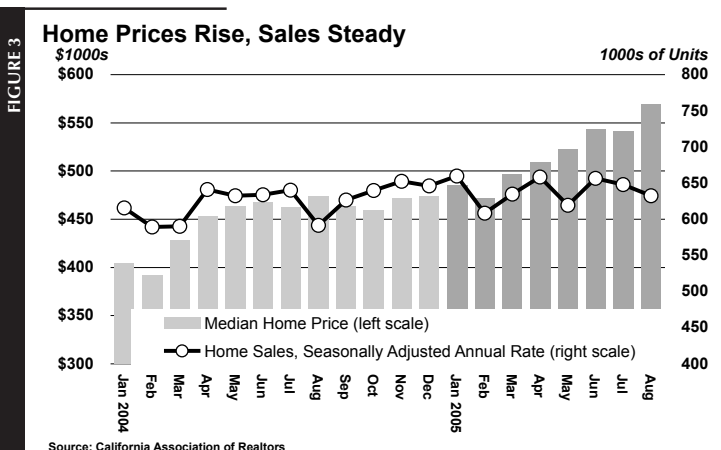

Nonresidential construction also slowed in August after a very strong July. The value of nonresidential permits issued dropped over 9 percent to a still-commendable \$16.6 billion annual rate. All building categories slowed, but the steepest declines were in the Industrial and Store sectors. For the first eight months of 2005 as a whole, nonresidential construction was up over 12 percent above the same months of 2004.

REAL ESTATE

Home prices continue to rise

California home prices continued to rise despite somewhat softer sales. The median price of existing single-family homes sold in August climbed to \$568,890, a 20-percent increase from a year earlier. Home sales, in contrast, slowed to an annual pace of 632,240 units, according to the California Association of Realtors. With the exception of February, the annualized rate of home sales during the first eight months of 2005 stayed within the 620,000 to 660,000 unit range.

Home prices may have received a boost from the anticipation of rising mortgage rates. Long-term fixed mortgage rates remain at levels comparable to a year ago, showing little response to Federal Reserve tightening. Adjustable-rate mortgages, in contrast, have risen nearly one-half percentage point. Both mortgage rates drifted higher in July and August, which may have been taken as a signal of higher rates to come.

■ CALIFORNIA FOREIGN TRADE

California is the nation's second leading exporting state and home to the nation's busiest international ports. Merchandise exports account for as much as 10 percent of the state's total economic output.

California's merchandise exports are dominated by high technology electronics. Computer and electronic product exports typically account for about 40% of the state's exports. This is followed by transportation equipment (principally aerospace) and nonelectrical machinery. These three sectors are the principal drivers of California exports.

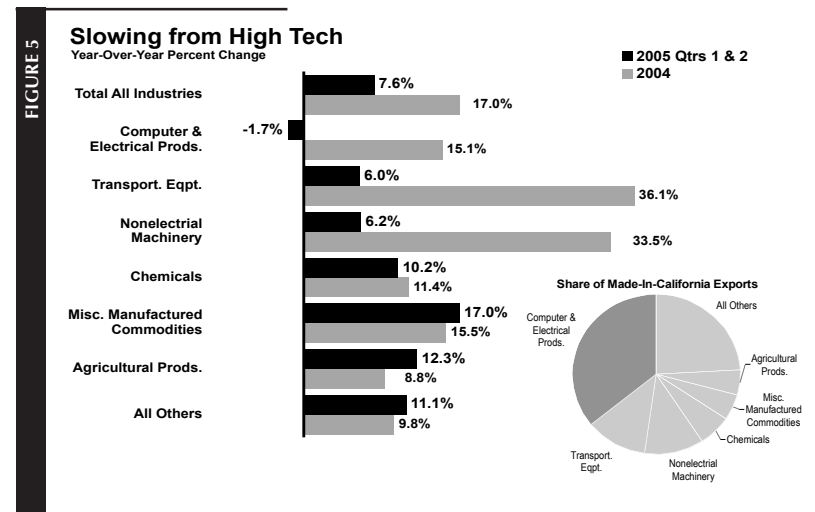

Resurgent investment spending in 2004, both domestic and abroad, led to a swelling demand for computers and electronics, resulting in explosive export growth. Made-in-California exports surged 25 percent in the first quarter of 2004 compared to the same quarter of 2003. Even though the pace of growth steadily slowed throughout the year, exports for 2004 as a whole were up 17 percent from 2003.

The first half of 2005, however, turned in a more modest performance. Made-in-California exports grew by only 4.6 percent in the first quarter of 2005 compared to the same period of 2004. This was followed by 6.1-percent growth in the second quarter. Thus exports from California during the first half of 2005 grew 5.3 percent over the first half of 2004—less than a third of 2004's pace.

EXPORT SLOWDOWN FROM HIGH TECHNOLOGY

The deceleration of export growth was largely the result of a reduction in computer and electronics exports and a dramatic slowdown in the growth of transportation and non-electrical machinery exports. Consumer and electronics exports actually declined 1.7 percent during the first half of 2005 compared to the same period of 2004. This followed healthy 15-plus percent growth in 2004. The growth of transportation and machinery exports, which outpaced computer and electronics growth in 2004, slowed dramatically in the first half of 2005. Transportation exports expanded only 6.0 percent during the first two quarter of 2005 versus over 36 percent in 2004. Nonelectrical machinery exports grew 6.2 percent in the first half of 2005, far slower than the 33.5 percent gain in 2004.

On the plus side, there was broad-based growth elsewhere. Exports accelerated across a broad range of products, including farm products and manufactured commodities which account for over 21 percent of total exports.

MIXED RESULTS IN LEADING MARKETS

The first half of 2005 saw very uneven performance among California's leading trading partners. The top five destinations of made-in-California exports received nearly half of the state's exports. Combined, exports to these destinations—Mexico, Canada, Japan, Mainland China, and South Korea—expanded just over 5 percent during the first two quarters of 2005.

Mexico

Exports to Mexico—California's leading destination—expanded 7.8 percent, approximately half the growth rate of 2004. Mexico's economy, and thus its demand for California exports, is strongly

influenced by U.S. economic activity and global crude oil prices. Slower U.S. economic growth at the end of 2004 and early 2005, led to slower growth for Mexico. Alternatively, rising crude oil prices should have a positive impact on Mexico's federal fiscal condition.

Canada

Exports to Canada—the second leading recipient—actually accelerated from last year's relatively modest growth rate. Despite political uncertainties, the Canadian economy has exceeded expectations and its real Gross Domestic Product (GDP) is now projected to grow by 2.8 percent in 2005. As long as the impact of high oil prices and natural disasters on the U.S. economy are mild or short-lived, Canada is poised for continued growth.

Japan

Hobbled by Japan's ebbing economic growth, state exports to Japan dropped 7.4 percent from the first half of 2004. Japan's economic growth in 2004—2.6 percent real GDP growth—was the best since 1996. However, the year started strong and then faded steadily throughout the year. Japan expanded only about 1.2 percent during the first half of 2005. Made-in-California exports to Japan, consequently, followed a similar pattern. Exports grew nearly 29 percent year-over-year during the first quarter of 2004, but then slowed dramatically through the rest of the year. Export growth turned negative at the beginning of 2005. The Japanese economy is projected to grow only by 1.5 percent for 2005 as a whole.

Mainland China

China has become California's most dynamic trading partner. Since 2000, China's share of California exports increased from 3 percent to nearly 7 percent. Exports to China exploded in 2004, growing over 25 percent on a year-over-year basis, and then stabilized in 2005, growing less than 5 percent during the first two quarters. This slowdown, however, does not correlate well with China's economic performance. According to a key Chinese government research agency, China's GDP is projected to rise by 9.2 percent in 2005, after growing by 9.3 percent in 2003 and 9.5 percent in 2004. Even though policy measures are being taken to dampen this overheated growth, the outlook is for continued strong growth for the indefinite future.

South Korea

Exports to South Korea have been stronger and more stable than those to most other leading destinations. Commendable economic growth in 2004—real GDP grew by 4.7 percent—was accompanied by a 22-percent increase in California-made shipments. Korean economic growth is projected to slow to around 3.2 percent in 2005. The growth of California exports slowed to 18.3 percent during the first half of 2005—the strongest rate among the top five destinations. Korea's economic growth should recover to the 4-plus percent range in 2006, which bodes well for California exports.

a/ Seasonally adjusted by the California Department of Finance with the exception of the nonagricultural and manufacturing employment and the unemployment rate which are seasonally adjusted by the California Employment Development Department.

ECONOMIC INDICATOR CHARTS

Series classification as leading or coincident indicators generally follows that established by the National Bureau of Economic Research. The exceptions to this are manufacturing employment and taxable sales. These series are discussed in the technical note below.

Whenever appropriate, data used in the charts have been seasonally adjusted. The method of seasonal adjustment is the X-12 Arima program. Persons interested in a detailed description of this method are referred to the U.S. Census Bureau's Statistical Research Division.

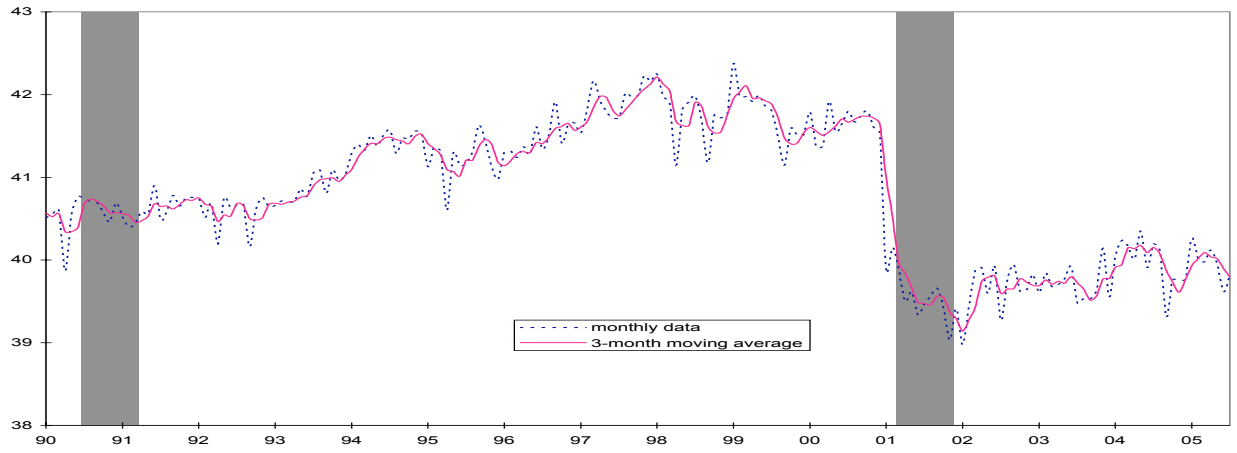

Under the X-12 Arima method, the addition of new data points changes historical seasonal factors. To avoid monthly data changes in the California Economic Indicators it is necessary to "freeze" the seasonally adjusted data through the past year and manually compute current year values from the projected seasonal factors. Thus historical revisions will be incorporated annually.

This series is an addition to the NBER indicator list. It is used here because it appears to show cyclical fluctuations clearly and extends the limited number of series presently available for the State.

Taxable sales are used here as a proxy for retail trade. Data on the latter are not available for California prior to 1964. The taxable series includes sales by both retail and wholesale establishments, and is, therefore, a broad indicator of business activity. It has been classified as a coincident indicator on the basis of fluctuations in the series since 1950. The other indicators shown are for general interest only. They are not directly related to the cyclical indicator series, but are of interest to persons looking at overall economic developments.

■ CHRONOLOGY

The following summary lists economic, political, and natural developments which have influenced California economic indicators, and may account for unusual movements in the series. Appraisal of the charts will be facilitated in many cases by taking into consideration those factors which may be contributing to temporary directional changes in business activity which are not indicative of significant changes in the economic situation of the State. In addition, major national and international events of general interest have also been included. A similar summary of events dating back to 1956 is available at the Department's internet home page at: www.dof.ca.gov

2001

- April 18** Federal funds rate reduced from 5.0 percent to 4.5 percent.
Discount rate reduced from 4.5 percent to 4.0 percent.
- April 23** A Tosco refinery explosion pushed gasoline prices to near record highs.
- April 24** Standard & Poors lowered California's bond rating from AA to A+
- April 27** GDP grew at an annual rate of 2 percent in the first quarter.
- May 7–8** California hit by rolling blackouts.
- May 15** Federal funds rate reduced from 4.5 percent to 4.0 percent.
Discount rate reduced from 4.0 percent to 3.5 percent.
- June 7** Federal tax cut was signed into law.
- June 18** The Federal Energy Regulatory Commission adopted a price "mitigation" plan designed to reduce spikes in wholesale electricity prices in California and other Western states.
- June 27** Federal funds rate reduced from 4.00 percent to 3.75 percent.
Discount rate reduced from 3.50 percent to 3.25 percent.
- June 29** First quarter GDP growth rate revised to 1.2 percent.
- August 21** Federal funds rate reduced from 3.75 percent to 3.50 percent.
Discount rate reduced from 3.25 percent to 3.00 percent.
- August 29** Second quarter GDP grew at a 0.2 percent annual rate.
Discount rate reduced from 3.25 percent to 3.00 percent.
- August 29** Second quarter GDP grew at a 0.2 percent annual rate.
- September 11** Terrorists attack World Trade Center and the Pentagon.
- September 11–14** U.S. stock trading halts.

September 17	Federal funds rate reduced from 3.50 percent to 3.00 percent. Discount rate reduced from 3.00 percent to 2.50 percent. Dow Jones Industrials record biggest point drop in history, falling 684.41.
October 2	Federal funds rate reduced from 3.00 percent to 2.50 percent. Discount rate reduced from 2.50 percent to 2.00 percent.
October 26	Lockheed Martin Corporation awarded defense contract.
November 6	Federal funds rate reduced from 2.50 percent to 2.00 percent. Discount rate reduced from 2.00 percent to 1.50 percent.
November 26	Recession in the US began in March 2001, according to NBER.
December 2	Enron filed for bankruptcy protection.
December 11	Federal funds rate reduced from 2.00 percent to 1.75 percent. Discount rate reduced from 1.50 percent to 1.25 percent. China becomes WTO member.
December 21	GDP down 1.3 percent in Q3.
December 31	Markets fall for a second straight year for the first time since 1974.

2002

January 1	Taiwan becomes WTO member. OPEC to cut oil production by 6.5 percent. Euro becomes legal tender in 12 European countries.
January 6	Unemployment insurance benefits increased in California.
February 28	GDP up 1.4 percent in Q4.
March 9	California's "Job Creation and Worker Assistance Act of 2002" was signed into law that provides for temporary extended unemployment compensation.
March 28	GDP up 1.7 percent in Q4.
April 25	Security and Exchange Commission launched a formal investigation of Wall Street analysts' conflicts of interest.
May 13	President Bush signed a 10-year, \$190 billion farm bill that promises to expand subsidies to growers.
June 27	GDP up 6.1 percent in Q1.
July 5	Foreign direct investment flows to developed countries declined by 56% in 2001, with the United States seeing the largest fall off to its lowest level since 1997.
July 8	Intel launches its Itanium 2 chip.
July 10	President Bush called for stiffer penalties to eradicate corporate fraud.
July 15	Pfizer to buy Pharmacia.
July 16	The dollar sank against the euro for the first time in more than two years. Intel to eliminate 4,000 jobs.
July 21	WorldCom filed for bankruptcy protection.
July 22	The Dow Jones industrial average sank to its lowest level in nearly four years. Both the Nasdaq and S&P 500 are at their lowest levels since the first half of 1997.
July 30	President Bush signed into law the Public Company Accounting Reform and Investor Protection Act.
July 31	GDP growth slowed to 1.1 percent in Q2 from revised 5.0 percent in Q1. Last year's data was also revised indicating that the economy shrank in each of the first three quarters.

	Venture capital investments hit four-year low.
August 8	IMF signed an emergency loan to Brazil.
August 11	U.S. Airways filed for bankruptcy.
August 20	The U.S. trade deficit narrowed in June, following two straight record monthly deficits.
September 27 –October 9	Cargo operations at 29 West Coast ports ground to a halt when terminal operators locked out unionized workers.
November 6	Federal funds rate reduced from 1.75 percent to 1.25 percent. Discount rate reduced from 1.25 percent to 0.75 percent.
December 9	United Airlines filed for bankruptcy protection.
December 19	Standard & Poor's lowered California's bond rating to an A from an A+.

2003

February 10	Moody's lowered California's bond rating to A2 from A1.
February 14–17	A major snowstorm hit the Middle Atlantic and Eastern states.
February 26	Doctors in Hong Kong report the first case of a flu-type virus "Atypical Pneumonia" now more commonly known as Severe Acute Respiratory Syndrome (SARS).
March 20	Operation Iraqi Freedom begins.
April 9	Baghdad falls and Iraqis and American troops topple statue of Saddam Hussein.
April 14	President Bush declares conclusion of major combat operations in Iraq.
June 25	Federal funds rate reduced from 1.25 percent to 1 percent, the lowest rate in 45 years.
June 26	GDP up 1.4 percent in Q1.
July 17	The US recession ended in November 2001, according to NBER.
July 24	S&P lowered California's bond rating from "A" to "BBB".
July 25	United States Treasury begins mailing \$400 per child tax rebate checks.
August 2	Governor Gray Davis signs the 2003-04 state budget bill.
August 4	Moody's lowered California's bond rating from A2 to A3.
August 28	GDP grew at a revised 3.1 percent annual rate in the 2 nd quarter.
September 3	Light vehicle sales in the U.S. reach 19.0 million in August, the second best monthly rate ever.
October 21	Wildfires breakout in Southern California, eventually burning 743,000 acres and destroying over 3,500 homes.
October 30	GDP grew by 7.2 percent, its fastest rate since 1984.
December 4	President Bush ends steel tariffs.
December 12	Dow Jones Industrial average closed above 10,000 for the first time since May 24, 2002.
December 13	Saddam Hussein captured by American troops.
December 23	Final report shows GDP grew by 8.2 percent in the third quarter, its fastest rate since 1984.
December 24	U.S. confirms first case of "mad cow" disease.

2004

February 10	Unexpected cut in OPEC quota and cold weather contribute to higher oil prices.
February 11	Dow Jones Industrials closed at highest level in more than 2½ years.
March 25	Fourth quarter GDP rose 4.1 percent.
April 30	International oil prices hit a 3½ year high.
May 21	Moody's raised California's credit rating from "Baa1" to "A3".
May 27	First quarter GDP grew at a 4.4 percent annual rate.
June 30	Federal funds rate increased by 25 basis points bringing the rate up to 1.25 percent. It is over four years since the Fed last tightened rates.
August 9	Fitch removes California from Rating Watch Negative.
August 10	Federal funds rate raised from 1.25 percent to 1.50 percent.
August 24	S&P raised California's credit rating from "BBB" to "A".
August 27	Second quarter GDP grew at a 2.8 percent annual rate.
Mid-August	Hurricane Charley hits Florida
September	Three powerful hurricanes (Frances, Ivan, and Jeanne) hit Florida and some neighboring states.
September 21	Federal funds rate raised from 1.50 percent to 1.75 percent.
October 29	GDP grew at a 3.7 percent rate in the third quarter.
November 10	Federal funds rate raised from 1.75 percent to 2.00 percent.
December 14	Federal funds rate raised from 2.00 percent to 2.25 percent.
December 22	GDP grew at a 4.0 percent annual rate in the third quarter.
December 26	A magnitude 9.0 earthquake — the largest in 40 years — struck the northern Indonesian island of Sumatra, triggering a tsunami that killed tens of thousands of people in more than 11 countries.

2005

January 22-24	Blizzards blanketed large parts of the Northeast.
January 30	Iraq held its first free election in half a century.
February 2	Federal funds rate raised from 2.25 percent to 2.50 percent.
March 22	Federal funds rate raised from 2.50 to 2.75 percent.
March 30	GDP grew at an annual rate of 3.8 percent in the fourth quarter of 2004.
April 28	GDP increased at an annual rate of 3.1 percent in the first quarter of 2005.
May 3	Federal funds rate raised from 2.75 to 3.00 percent
June 29	GDP increased at an upwardly revised 3.8 percent in the first quarter of 2005.
June 30	Federal funds rate raised from 3.00 percent to 3.25 percent.
July 11	Governor Arnold Schwarzenegger signs the 2005-06 state budget bill. Moody's Investor Services and Fitch Ratings upgraded the state's bond ratings.
August 9	Federal funds rate raised from 3.25 percent to 3.50 percent.
August 29	Hurricane Katrina ripped through Louisiana, Mississippi and Alabama causing billions of dollars in damage.
August 31	GDP increased at an annual rate of 3.8 percent in the first quarter and 3.3 percent in the second quarter of 2005.
